

Types of Collaboration	Examples
<p>Cooperative Learning</p> <p>In a cooperative group, every student has a specific task, everyone must be involved in the learning or project, and no one can "piggyback." The success of the group depends on the successful work of every individual.</p>	
<p>Collaborative Learning</p> <p>“Collaborative learning” is an umbrella term for a variety of educational approaches involving joint intellectual effort by students, or students and teachers together. Usually, students are working in groups of two or more, mutually searching for understanding, solutions, or meanings, or creating a product. Collaborative learning activities vary widely, but most center on students’ exploration or application of the course material, not simply the teacher’s presentation or explication of it.</p>	
<p>Team Learning</p> <p>Students are organized into permanent, strategically-organized small groups for learning activities.</p>	
<p>Study Groups</p> <p>Effective study groups involve hashing out lesson materials together—explaining concepts, arguing about them, figuring out why one person's answer differs from another's—and in the process, you learn more than you ever would have studying by yourself.</p>	
<p>Reciprocal Learning</p> <p>Reciprocal teaching refers to an instructional activity that takes place in the form of a dialogue between teachers and students regarding segments of text which is structured by the use of four strategies: summarizing, question generating, clarifying, and predicting.</p>
